1. WELCOME!

1.1 About the product

Overview
Thank you for choosing this Nio 3MP LED Display!

Nio 3MP LED Display is an industry-standard 3MP color display system with LED backlights for dependable diagnostic viewing in high-bright color. Nio 3MP LED Display provides an effective display solution for a multitude of applications and modalities, including 3D PACS, 3D echo, ultrasound, orthopedic imaging, CAD, image fusion, nuclear medicine and PET.

Confident color reading
Equipped with high-bright LED backlights, Nio 3MP LED Display delivers excellent brightness and more shades of gray to detect subtle details more quickly. The unique front sensor ensures you see consistent and precise images at all times for confident diagnoses.

On-demand image quality checks
As the front sensor works seamlessly together with Barco’s online MediCal QAWeb service for automated Quality Assurance and calibration, Nio 3MP LED Display makes sure you are viewing perfect DICOM images — at the click of a button — without interrupting your workflow.

A good investment
Using power-efficient LED backlights, Nio 3MP LED Display is as low in power consumption as it is high in brightness. Because it uses less power, the display produces less heat and requires less cooling, which impacts maintenance and operational costs. Additionally, the LED backlights offer a long lifetime — even at high brightness — providing a high return on your investment.

CAUTION: Read all the important safety information before installing and operating your Nio 3MP LED Display. Please refer to the dedicated chapter in this user guide.

1. Welcome!

1.3 What's in the box

Overview
Your Nio 3MP LED Display comes with:

- the display
- a system tilt and swivel foot
- this Nio 3MP LED Display user guide
- a system CD
- a DisplayPort cable
- a DVI cable
- an USB cable
- an AC power cord
- an external power supply

If you ordered a Barco display controller, it's also in the box together with its accessories. A dedicated user guide is available on the system CD.

Keep your original packaging. It is designed for this display and is the ideal protection during transport and storage.
2. PARTS, CONTROLS AND CONNECTORS

2.1 Display front view

Overview

Image 2-1
Front view

1. Left key
2. Right key
3. Menu key
4. Standby key
5. Power LEDs
6. Bottom downstream USB

The key icons are displayed above the keys, adapted to the function that it is used for (menu dependent). See "Navigating through the OSD menus", page 17.
2. Parts, controls and connectors

2.2 Display rear view

Connector compartment cover closed

Image 2-2
Rear view with closed connector compartment cover

1. +24 VDC power input
2. +5 VDC, 0.5A power output
3. DisplayPort video input
4. DVI video input
5. Ethernet connector (see note below)
6. USB upstream connector
7. USB downstream connector

The Ethernet connection is used for maintenance purposes and is not supported for user application.
2. Parts, controls and connectors
3. DISPLAY INSTALLATION

Prior to installing your Nio 3MP LED Display and connecting all necessary cables, make sure to have a suitable display controller physically installed in your computer. If you are using a Barco display controller, please consult the user guide delivered with it to do this.

3.1 Unlocking the height mechanism

To remove the clip:
1. Position the display with its rear side facing you.
2. Pull the red clip out of the fixation hole in the foot.
3. Keep the clip in the dedicated hole in case the display needs to be shipped later.

3.2 Adjusting the display position

To adjust the display position
1. Stand at the front side of the panel and take the panel at both sides.
2. Very important: Tilt the panel upwards before changing the orientation.
3. To change from portrait to landscape, turn the panel counterclockwise.
4. To change from landscape to portrait, turn clockwise.
3. Display installation

If, after installing the display of the system, you change the panel orientation while an image is on the screen, the result depends on the graphic board and the resolution of the image. In some cases the image will be rotated automatically, in other cases it will not be rotated (e.g., when pixels would be lost after rotation). If necessary, change the image resolution in the display control panel and restart the system after changing the orientation.

3.3 Removing the connector compartment cover

To remove the connector compartment cover

1. Gently push the two lips on top of the cover
2. Pull the top of the cover slightly away from the display and lift the cover upwards.

3.4 Connecting the signal cables

CAUTION: Only connect one of the two video links. Connecting both inputs simultaneously will result in driver errors.

To connect the signal cables to the display:

To get access to the connectors, remove the connector compartment cover. See "Removing the connector compartment cover", page 10.

You may connect the display to a display controller by using the DVI or the DP connection. The input selection of the device is automatically done. By default, the DisplayPort input has priority over the DVI input. This can be changed in the OSD menu.
3. Display installation

1. Connect the DVI or DP of the display controller to the DVI or DP connector of the display.

2. If you want to make use of the display's USB upstream connector, connect a PC USB downstream connector to the display's USB upstream connector.

3. If you have chosen to use the display's USB downstream connector, connect a USB device to the downstream connector.
4. Connect the supplied external DC power supply to the +24 Vdc power input of the display.
5. Plug the mains connector of the external DC power supply to a grounded power outlet by means of one of the supplied power cables.
3. Display installation

3.5 Routing the cables & Reattach the connector compartment cover

To route the cables
1. Route all connected cables through the cable routing channel in the stand of your display.

Tip: The cable straps at the inside of the connector compartment allow you to fix the cables for better shielding of the cables.

To Reattach the connector compartment cover
1. Reattach the connector compartment cover by sliding the cover’s bottom in position and then push the cover’s top. You’ll hear a “click” sound of the cover’s clips when the connector compartment cover is in position.

3.6 VESA-mount installation

CAUTION: Use suitable mounting apparatus to avoid risk of injury.

WARNING: Never move a display attached to an arm by pulling or pushing the display itself. Instead, make sure that the arm is equipped with a VESA approved handle and use this to move the display.

Please refer to the instruction manual of the arm for more information and instructions.
WARNING: Use an arm that is approved by VESA (according to the VESA 100 mm standard).

Use an arm that can support the weight of the display. Refer to the technical specifications of this display for the applicable weight.

Overview

The panel, standard attached to the tilt & swivel foot, is compatible with the VESA 100 mm standard. So it can be used with an arm stand according to the VESA 100 mm standard.

Therefore, the tilt & swivel foot must be removed from the panel.

1. Put the display in the lowest position and fasten the height mechanism, see "Unlocking the height mechanism", page 9.

2. Put the display face down on a clean and soft surface. Be careful not to damage the panel screen.

3. Remove the plastic cover with a flathead screw driver.

4. Slide the plastic cover over the neck of the foot.
3. Display installation

5. Remove the four screws fixing the foot while supporting the foot.

6. Attach the arm stand firmly to the panel using 4 screws M4 x 8 mm.

3.7 First time starting up

Overview
You are now ready to start up your Nio 3MP LED Display for the first time.

1. Switch on your Nio 3MP LED Display as described in "Standby switching", page 16.
2. Turn on the computer connected to your display.

If you have properly installed your display and display controller, the Windows start-up messages will appear once the boot procedure is finished.

Your Nio 3MP LED Display will be running in a basic video mode at a default refresh rate when first time starting up. If you are using a Barco display controller, please consult the user guide delivered with it to install the drivers, software and documentation. When this is done, your display will automatically detect the connected video input signal(s) and apply the correct video mode and refresh rate.
4. DAILY OPERATION

4.1 Recommendations for daily operation

Optimize the lifetime of your display
Enabling the Display Power Management System (DPMS) of your display will optimize its diagnostic lifetime by automatically switching off the backlight when the display is not used for a specified period of time. By default, DPMS is enabled on your display, but it also needs to be activated on your workstation. To do this, go to “Power Options Properties” in the “Control Panel”.

Barco recommends setting DPMS activation after 20 minutes of non-usage.

Use a screen saver to avoid image retention
Prolonged operation of an LCD with the same content on the same screen area may result in a form of image retention.

You can avoid or significantly reduce the occurrence of this phenomenon by using a screen saver. You can activate a screen saver in the “Display properties” window of your workstation.

Barco recommends setting screen saver activation after 5 minutes of non-usage. A good screen saver displays moving content.

In case you are working with the same image or an application with static image elements for several hours continuously (so that the screen saver is not activated), change the image content regularly to avoid image retention of the static elements.

Understand pixel technology
LCD displays use technology based on pixels. As a normal tolerance in the manufacturing of the LCD, a limited number of these pixels may remain either dark or permanently lit, without affecting the diagnostic performance of the product. To ensure optimal product quality, Barco applies strict selection criteria for its LCD panels.

To learn more about LCD technology and missing pixels, consult the dedicated white papers available at www.barco.com/healthcare.

Enhance user comfort
Every Barco multi-head display system is color matched with the highest specifications in the market.

Barco recommends keeping color-matched displays together. Furthermore, it is important to use all displays of a multi-head configuration at the same rate to preserve color matching throughout the economic lifetime of the system.
4. Daily operation

Maximize quality assurance
The 'MediCal QAWeb' system offers online service for high-grade Quality Assurance, providing maximum diagnostic confidence and uptime.

Barco recommends to install MediCal QAWeb Agent and apply the default QAWeb policy at least. This policy includes calibration on regular intervals. Connecting to MediCal QAWeb Server offers even more possibilities.

Learn more and sign up for the free MediCal QAWeb Essential level at www.barco.com/healthcare/qa.

4.2 Key indicator lights

About the key indicator lights
By default, the indicator lights of the keys will be dimmed which makes the keys unavailable at that moment. To make the keys illuminate and available for further actions touch one of the keys. As a result, all keys will be illuminated and are now available for further actions. However, if no further actions are taken within the following 5 seconds, the keys will dim again.

The key auto-dim function can be disabled in the OSD menus. Please refer to "Key indicator lights", page 20 for detailed instructions on how to do this.

4.3 Standby switching

About standby switching

The connected power supply also provides a switch that can be used to turn the power completely off. To use the display, please make sure to switch on this power supply. This can be done by pushing the on/off switch on the power supply into the “|” position.

Switching on the display while it is in standby mode or vice versa can be done by:
1. Illuminate the keys as previously described.
2. While the keys are illuminated, touch the standby key (right button) for approximately 2 seconds.

As a result, the display will switch on or will switch to standby mode. When the display is switched on, the power LED is white. When the display is in standby mode, the power LED is orange.

The power LED can be disabled in the OSD menus. Please refer to "Power status indicator light", page 19 for detailed instructions on how to do this.

In case of a power outage recovery, your display will always start-up in the power mode it was in before the power interruption (i.e. standby or on). This protects your display against inadvertent image retention problems.
4. Daily operation

4.4 Bringing up the OSD menus

How to bring up the OSD menus

The OSD menu allows you to configure different settings to make your Nio 3MP LED Display fit your needs within your working environment. Also, you can retrieve general information about your display and its current configuration settings through the OSD menu.

Bringing up the OSD menus can be done by:
1. If not already done so, switch on the display as previously described.
2. Illuminate the keys as previously described.
3. While the keys are illuminated, touch the menu key.

As a result, the OSD main menu comes up in the bottom right corner of the screen. However, if no further actions are taken within the following 90 seconds, the OSD will disappear again.

The OSD menu auto-exit function can be disabled in the OSD menu. Please refer to “OSD menu automatic close function”, page 19 for detailed instructions on how to do this.

4.5 Navigating through the OSD menus

How to navigate through the OSD menus

Navigating through the OSD menus can be done by:

- Use the left/right keys to move through the (sub)menus, change values or make selections.
- To go into a submenu or confirm adjustments and selections, use the menu key.
- Use the standby key to cancel adjustments or exit a (sub)menu.
- Exit all OSD menus at once by touching the standby key for approximately 2 seconds.

The key icons are displayed above the keys, adapted to the function that it is used for (menu dependent).

Overview key icons

- Left, Right
- Menu
- Enter
4. Daily operation

Cancel

Standby (IEC 60417–5009)
5. ADVANCED OPERATION

5.1 OSD menu language

About the OSD menu language
By default, the OSD menu comes up in English. However, there's a wide range of other languages available for the OSD menu of your Nio 3MP LED Display.

To change the language of the OSD menu:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > User Interface > Menu menu.
3. Enter the Language submenu.
4. Select one of the available languages and confirm.

5.2 OSD menu automatic close function

About the OSD menu automatic close function
By default, the OSD menu will disappear automatically after approximately 90 seconds of inactivity. However, this function can be disabled so that the OSD menu remains on the screen until manually closed.

To enable/disable the OSD menu automatic close function:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > User Interface > Menu menu.
3. Enter the Automatic Close submenu.
4. Select Enabled/Disabled as desired and confirm.

5.3 Power status indicator light

About the power status indicator light
By default, when the display is switched on, the power status indicator light is dimmed. This behavior can be changed so that the power status indicator light will be blue when the display is switched on.

When the display is in stand-by mode, the power status indicator light will always turn orange, even when the power status indicator light is disabled.

To enable/disable the power status indicator light:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > User Interface > Indicator Lights menu.
3. Enter the Power Status submenu.
4. Select Enabled/Disabled as desired and confirm.
5. Advanced operation

5.4 Key indicator lights

About the key indicator lights
By default, after lighting up, the key indicator lights will dim again if no further actions are taken within the following 5 seconds. However, this behavior can be changed so that the key indicator lights are always on or always off.

To configure the key indicator lights
1. Bring up the OSD main menu.
2. Navigate to the Configuration > User Interface > Indicator Lights menu.
3. Enter the Keys submenu.
4. Select Automatic/Always On/Always Off as desired and confirm.

5.5 Power lock function

About the power lock function
By enabling the power lock function, the Nio 3MP LED Display is forced to remain switched on. This means that it can’t be switched to stand-by mode manually until the power lock function is disabled again.

To enable/disable the power lock function:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > User Interface > Controls menu.
3. Enter the Power Lock submenu.
4. Select Enabled/Disabled as desired and confirm.

5.6 Ethernet over USB

About Eth. over USB
By default, the Ethernet over USB will be disabled. This does not disable the USB hub and still allows to make use of the display’s USB downstream connectors and any external devices connected to it (keyboard, mouse, ...).

Please note that a connection from a PC USB downstream connector to the display’s USB upstream connector is required to be able to use this functionality.

By enabling the Ethernet over USB, you allow the internal Nio 3MP LED Display processor to communicate directly over USB with the connected PC.

Enabling the Ethernet over USB is only recommended when you are using a non-Barco display controller. If you are using a Barco display controller, this communication will automatically be done over the connected video cable(s).

To enable/disable the eth. over USB:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Connectivity menu.
3. Enter the Eth. over USB submenu.
4. Select Enabled/Disabled as desired and confirm.
5.7 USB

About USB

By default, USB will be enabled. This will allow the connected PC to communicate directly over USB with the internal Nio 3MP LED Display processor.

By disabling USB, communication between the internal Nio 3MP LED Display processor and the connected PC will not be possible. This does not disable the USB hub and still allows to make use of the display's USB downstream connectors and any external devices connected to it (keyboard, mouse, ...).

Please note that a connection from a PC USB downstream connector to the display's USB upstream connector is required to be able to use this functionality.

Enabling the USB endpoint is only recommended when you are using a non-Barco display controller. If you are using a Barco display controller, this communication will automatically be done over the connected video cable(s).

To enable/disable USB:

1. Bring up the OSD main menu.
2. Navigate to the Configuration > Connectivity menu.
3. Enter the USB submenu.
4. Select Enabled/Disabled as desired and confirm.

5.8 DPMS mode

About DPMS mode

Enabling the Display Power Management System (DPMS) mode on your display will optimize its diagnostic lifetime by automatically switching off the backlight when the display is not used for a specified period of time. By default, DPMS mode is enabled on your display, but it also needs to be activated on your workstation. To do this, go to the “Power options properties” window of your workstation.

Barco recommends setting DPMS activation after 20 minutes of non-usage.

When DPMS mode is enabled on your display, an additional OSD power saving function becomes available: hibernate. Please refer to "Hibernate", page 22 for more information on hibernation and how to enable this function.

To enable/disable DPMS mode on your display:

1. Bring up the OSD main menu.
2. Navigate to the Configuration > Power Management menu.
3. Enter the DPMS Mode submenu.
4. Select Enabled/Disabled as desired and confirm.
5.9 Hibernate

About hibernate
Enabling hibernation will not only switch off the backlight but will also force the display to disable other functionalities so that power consumption is further reduced to a minimum. This happens after a specific period of time which can be manually adjusted.

Hibernate can only be enabled on your display when the DPMS mode is enabled first. Therefore, please refer to "DPMS mode", page 21 to do this.

To enable/disable hibernation on your display:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Power Management menu.
3. Enter the Hibernate submenu.
4. Select Enabled/Disabled as desired and confirm.

To specify the hibernate timeout:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Power Management menu.
3. Enter the Hibernate Timeout submenu.
4. Set the timeout value as desired and confirm.

5.10 Luminance target

About the luminance target
The luminance target of your Nio 3MP LED Display is adjustable over a predefined range. When you change the luminance target, the display will adjust its backlight to reach the target.

To set the luminance target:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Calibration menu.
3. Enter the Luminance Target submenu.
4. Set a luminance target value as desired and confirm.

The default, factory DICOM calibrated luminance value is available in the technical specifications table. The guaranteed backlight lifetime is valid for this setting.

5.11 Viewing modes

About viewing modes
The Nio 3MP LED Display can be used in two viewing modes:
5. Advanced operation

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diagnostic</td>
<td>This mode provides the full calibrated luminance and is intended for using the display for diagnostic purposes.</td>
</tr>
<tr>
<td>Text</td>
<td>In this mode, the luminance is reduced to approximately half of the luminance. This is intended for using the display with office applications such as word processing. Please note that text mode is not persistent, once powered off, the unit will restart in diagnostic mode.</td>
</tr>
</tbody>
</table>

To quickly switch the viewing mode without having to enter the OSD menu, touch the left and right key (the two leftmost buttons) at the same time during normal operation.

As the Nio 3MP LED Display is intended to be used in a diagnostic environment, the diagnostic mode should always be selected.

To select a viewing mode:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Calibration menu.
3. Enter the Viewing Mode submenu.
4. Select Diagnostic/Text as desired and confirm.

5.12 Display functions

About display functions
Native, uncorrected panels will display all grayscale/color levels with luminance increments that are not optimal for crucial diagnostic information. Studies have shown however, that in medical images certain grayscale/color parts contain more diagnostic information than others. To respond to these conclusions, display functions have been defined. These functions emphasize on these parts containing crucial diagnostic information by correcting the native panel behavior.

<table>
<thead>
<tr>
<th>Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Native</td>
<td>If you select Native, the native panel behavior will not be corrected.</td>
</tr>
<tr>
<td>Dynamic Gamma 1.8</td>
<td>These are gamma functions that are shifted to take into account the non-zero luminance of an LCD panel when driven with a “black” signal. They are especially useful in CT applications to improve the perception of low Hounsfield values.</td>
</tr>
<tr>
<td>Dynamic Gamma 2.2</td>
<td></td>
</tr>
<tr>
<td>DICOM</td>
<td>DICOM (Digital Imaging and Communications in Medicine) is an international standard that was developed to improve the quality and communication of digital images in radiology. In short, the DICOM display function results in more visible grayscales in the images. Barco recommends selecting the DICOM display function for most medical viewing applications.</td>
</tr>
</tbody>
</table>
5. Advanced operation

### Table

<table>
<thead>
<tr>
<th>User</th>
<th>This display function will be automatically selected when display functions are defined by MediCal QAWeb.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gamma 1.8</td>
<td>Select one of these display functions in case the display is to replace a CRT display with a gamma of 1.8 or 2.2 respectively.</td>
</tr>
<tr>
<td>Gamma 2.2</td>
<td></td>
</tr>
</tbody>
</table>

**To select a display function:**
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Calibration menu.
3. Enter the Display Function submenu.
4. Select one of the available display functions and confirm.

#### 5.13 Ambient Light Compensation (ALC)

**About ALC**

Ambient Light Compensation (ALC) can only be enabled on your display when the DICOM display function is selected. Therefore, please refer to "Display functions", page 23 to correctly set the display function.

When ALC is enabled, the DICOM display function will be recalculated taking a preset ambient light correction value into account. This value is determined by the selected reading room. Therefore, it is also important to select a realistic reading room when enabling ALC. This can be done by following the instructions in "Reading rooms", page 24.

**To enable/disable ALC:**
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Calibration > Ambient Light menu.
3. Enter the Ambient Light Compensation submenu.
4. Select Enabled/Disabled as desired and confirm.

#### 5.14 Reading rooms

**About reading rooms**

Reading rooms can only be selected when the DICOM display function is selected. Therefore, please refer to "Display functions", page 23 to correctly set the display function.

The American Association of Physicists in Medicine (AAPM) composed a list of pre-defined reading rooms. Each of these reading rooms are defined by following parameters:

- the maximum light allowed in this type of room
- the preset ambient light correction value for this reading room

These parameters are stored in your display and determine the preset ambient light correction value to take into account to recalculate the DICOM display function when Ambient Light Compensation (ALC) is enabled. Please refer to "Ambient Light Compensation (ALC)", page 24 to enable ALC.
The available reading rooms for your Nio 3MP LED Display are:

<table>
<thead>
<tr>
<th>Reading Room</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CR/DR/ MAMMO</td>
<td>Corresponds to light conditions in diagnostic reading rooms for computed radiology, digital radiology or mammography. This setting has the lowest maximum ambient light.</td>
</tr>
<tr>
<td>CT/MR/NM</td>
<td>Corresponds to light conditions in diagnostic reading rooms for computed tomography, magnetic resonance or nuclear medicine scans.</td>
</tr>
<tr>
<td>Staff Office</td>
<td>Corresponds to light conditions in office rooms.</td>
</tr>
<tr>
<td>Clinical Viewing Room</td>
<td>Corresponds to light conditions in diagnostic reading rooms for clinical viewing.</td>
</tr>
<tr>
<td>Emergency Room</td>
<td>Corresponds to light conditions in emergency rooms.</td>
</tr>
<tr>
<td>Operating Room</td>
<td>Corresponds to light conditions in operating rooms. This setting has the highest maximum ambient light.</td>
</tr>
</tbody>
</table>

To select a reading room:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Calibration > Ambient Light menu.
3. Enter the Reading Room submenu.
4. Select one of the available reading rooms and confirm.

### 5.15 Embedded QA

#### Overview
- About Embedded QA
- DICOM status report
- DICOM compliance check
- DICOM calibration
- Reset DICOM calibration
- DICOM error threshold

#### 5.15.1 About Embedded QA

**About**

Embedded QA allows you to run a display calibration or compliance test directly from the display using the OSD menus described in the next sections. Embedded QA will use the front sensor / I-Guard to measure the necessary luminance levels for either a calibration or compliance test. Various settings for both actions can be selected from the display’s OSD menu. The last results of both actions can be consulted from the OSD.

**Embedded QA or MediCal QAWeb?**

Embedded QA is not a replacement for the Barco MediCal QAWeb solution. Although Embedded QA is a reliable option to perform a simple calibration or compliance test, Barco still highly recommends MediCal QAWeb as the solution of choice for calibration and QA. Medical QAWeb brings many benefits such as centralized asset management, the ability to schedule tasks, remote management, automated reporting, alerting and specific support of regional QA standards such as DIN 6868-57, JESRA and AAPM TG18. That's why MediCal QAWeb Agent acts as the master for all supported displays from the moment it is installed and running, MediCal QAWeb Agent will take over from Embedded QA and overwrite any settings which were applied by Embedded QA.
5. Advanced operation

5.15.2 DICOM status report

About DICOM status report

Following information is available:

<table>
<thead>
<tr>
<th>DICOM Compliance Status (status since last compliance check)</th>
<th>Compliance status</th>
<th>Shows if the current DICOM curve is compliant or not.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum error</td>
<td>Shows the maximum error of the current DICOM curve. This is the deviation compared to a perfect DICOM.</td>
<td></td>
</tr>
<tr>
<td>Error threshold</td>
<td>Shows the error threshold. This is the maximum error allowed before a DICOM calibration is required.</td>
<td></td>
</tr>
<tr>
<td>Time elapsed since latest compliance check</td>
<td>Shows the backlight runtime since last compliance check.</td>
<td></td>
</tr>
<tr>
<td>Display Function</td>
<td>Shows the current display function.</td>
<td></td>
</tr>
<tr>
<td>Ambient light compensation</td>
<td>Shows the ambient light compensation status.</td>
<td></td>
</tr>
<tr>
<td>Reading Room</td>
<td>Shows the selected reading room.</td>
<td></td>
</tr>
<tr>
<td>Luminance</td>
<td>Shows the measured luminance.</td>
<td></td>
</tr>
<tr>
<td>Black luminance</td>
<td>Shows the measured backlight luminance.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>DICOM Calibration Status</th>
<th>No calibration executed yet.</th>
<th>No other information is visible</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calibration executed.</td>
<td>When the calibration is executed, the following extra information is shown: Backlight runtime elapsed since latest calibration, display function, ambient light compensation, reading room.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Current DICOM Settings</th>
<th>Display function</th>
<th>Shows the current display function.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ambilient Light Compensation</td>
<td>Shows the ambient light compensation status.</td>
<td></td>
</tr>
<tr>
<td>Reading room</td>
<td>Shows the selected reading room.</td>
<td></td>
</tr>
</tbody>
</table>

To retrieve the DICOM status report:

1. Bring up the OSD main menu.
2. Navigate to the Configuration > Calibration > Embedded QA menu.
3. Select DICOM status report to make the information visible on the screen.

5.15.3 DICOM compliance check

About DICOM compliance check

The DICOM compliance check will measure the DICOM curve of your display in different steps. After measurement, the DICOM status report is shown.

To start DICOM compliance check:

1. Bring up the OSD main menu.
2. Navigate to the Configuration > Calibration > Embedded QA menu.
3. Select DICOM compliance check to start the compliance check.

Warning: Pressing a key during the compliance check will abort the check.
5. Advanced operation

5.15.4 DICOM calibration

About DICOM calibration
The DICOM calibration will add a correction to the current DICOM curve to approach the perfect DICOM curve as good as possible.

To start DICOM calibration:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Calibration > Embedded QA menu.
3. Select DICOM calibration to start the calibration.
   Warning: Pressing a key during calibration will abort the calibration, previous values will be restored.
   Note: After calibration, the compliance check will start automatically.

5.15.5 Reset DICOM calibration

About reset DICOM calibration
It is possible to restore the original (not corrected) DICOM curve.

To reset the DICOM calibration:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Calibration > Embedded QA menu.
3. Enter the DICOM preferences submenu.
4. Select reset DICOM calibration to restore the original (not corrected) DICOM curve.

5.15.6 DICOM error threshold

About DICOM error threshold
The threshold to define the DICOM compliance can be modified in steps of 5% starting from 5 to 30%. When the maximum deviation is not bigger than the selected threshold, the compliance check will be OK.

To set the DICOM error threshold:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Calibration > Embedded QA menu.
3. Enter the DICOM preferences submenu.
4. Set DICOM error threshold as desired and confirm.

5.16 Image scaling

About image scaling
Enabling image scaling will multiply each individual pixel to one or more adjacent pixels so that the size of the displayed image will be a multiple of the original image source video input signal.

Image scaling is only possible when the resolution of your display's video input signal is less than or equal to half the maximum resolution of the display.
5. **Advanced operation**

To enable/disable image scaling:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Image Source menu.
3. Enter the Scaling submenu.
4. Select Enabled/Disabled as desired and confirm.

5.17 **Display orientation**

**About Display orientation**

Your display automatically detects its physical orientation (portrait or landscape) and, by default, automatically adjusts the image orientation to this. This means that when your display is physically rotated, the image will rotate along.

The OSD menu however, allows to overrule this behavior and force the image orientation to portrait or landscape regardless of the physical orientation of the display. This may be especially useful when operating your display with the screen facing upwards.

To set the Display orientation
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Image Sources menu.
3. Enter the Display Orientation submenu.
4. Select Landscape/Portrait/Automatic as desired and confirm.

5.18 **Video input signals**

**About input signals**

The available input signals for your display are:

<table>
<thead>
<tr>
<th>Input Signal</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DisplayPort 1</td>
<td>The input corresponding to the DisplayPort connector.</td>
</tr>
<tr>
<td>DVI 1</td>
<td>The input corresponding to the DVI connector.</td>
</tr>
<tr>
<td>Automatic Selection</td>
<td>The input is automatically selected.</td>
</tr>
</tbody>
</table>

To manually select a video input signal:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Image Source menu.
3. Enter the Input Signal submenu.
4. Select one of the available input signals and confirm.

5.19 **Video encoding modes**

**About video encoding modes**

Video encoding modes specify how the color and luminance information is encoded in the video signal. In consumer displays, this is usually done by a limited 8-bit encoding mechanism. Your Nio 3MP LED Display
however, features 10-bit encoding enabling it to better match the DICOM defined grayscale range. Such an extensive range is necessary to comply with the guidelines set forward by the latest medical guidelines.

The available video encoding modes for your display are listed below.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard</td>
<td>This mode uses the standard 8 bit encoding mechanism.</td>
</tr>
<tr>
<td>HDR1</td>
<td>This mode features 10-bit video encoding following the High Dynamic Range (HDR) standard, usually used on color displays.</td>
</tr>
<tr>
<td>HDR2</td>
<td>HDR2 is a Barco specific mode featuring 10-bit video encoding following the High Dynamic Range (HDR) standard but allowing full refresh rate (which is not always possible with HDR1). This mode is usually used on color displays.</td>
</tr>
<tr>
<td>Dual 10 (only with Barco display controller)</td>
<td>Dual 10 is a Barco specific 10-bit video encoding mode which is usually used on grayscale displays and which allows full refresh rate.</td>
</tr>
<tr>
<td>Automatic</td>
<td>When selecting this option, your Nio 3MP LED Display will automatically assign the correct video encoding settings to the connected video input signals.</td>
</tr>
</tbody>
</table>

**To manually select a video encoding mode:**

1. Bring up the OSD main menu.
2. Navigate to the Configuration > Image Source menu.
3. Enter the Video Encoding submenu.
4. Select one of the available video encoding modes and confirm.

### 5.20 Grayscale conversion modes

#### About grayscale conversion modes

Grayscale conversion modes specify how color generated on the display controller is converted to grayscale in your display.

The available grayscale conversion modes are:

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>No Conversion</td>
<td></td>
</tr>
<tr>
<td>Use Red Channel</td>
<td>This mode is intended for grayscale displays where gray is sent over the red channel.</td>
</tr>
<tr>
<td>Use Green Channel</td>
<td>This mode is intended for grayscale displays where gray is sent over the green channel.</td>
</tr>
<tr>
<td>Use Blue Channel</td>
<td>This mode is intended for grayscale displays where gray is sent over the blue channel.</td>
</tr>
<tr>
<td>Use All Channels</td>
<td>This mode is intended for grayscale displays where gray is sent over the red, green and blue channel. This is done by means of a standard conversion mechanism where 30% red, 59% green and 11% blue are used to generate gray.</td>
</tr>
</tbody>
</table>
5. Advanced operation

To manually select a grayscale conversion mode:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Image Source menu.
3. Enter the Grayscale Conversion submenu.
4. Select one of the available color conversion modes and confirm.

5.21 EDID timings

About EDID timings
Following EDID timings are available for your Nio 3MP LED Display:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Refresh Rate</td>
<td>Allows to manually select the refresh rate of the image source video input signal depending on the maximum refresh rate of the display controller connected to your display.</td>
</tr>
<tr>
<td>Preferred Orientation</td>
<td>Allows to change the orientation of the image source video input signal to landscape, portrait or to let the display automatically assign the correct orientation.</td>
</tr>
<tr>
<td>Color Depth</td>
<td>Allows to change the color depth to 8 or to 10 bit.</td>
</tr>
</tbody>
</table>

To manually set EDID timings:
1. Bring up the OSD main menu.
2. Navigate to the Configuration > Image Source menu.
3. Enter the Timings submenu.
4. Select Refresh Rate, Preferred Orientation or Color Depth.
5. Select one of the available settings and confirm.

5.22 Display info

About display info
Your display serial number, color type, native resolution, firmware versions, etc. are available in a dedicated submenu of the OSD menu.

To retrieve info about your display:
1. Bring up the OSD main menu.
2. Navigate to the About this Display menu to make the information visible on the screen.

5.23 Display status

About display status
The Status submenu of the OSD menu provides info on the current status of your display (runtimes, temperatures, etc.), the status of the connected image sources (video encoding mode, timings, etc.), the current calibration status of your display (display function, luminance, ALC, etc.) and the status about activated connections.
5. Advanced operation

To retrieve the status of your display:

1. Bring up the OSD main menu.
2. Navigate to the Status menu.
3. Enter the Display, Image Sources, Calibration or Connectivity submenu as desired.
5. Advanced operation
WARNING: Before repacking the display, follow the instruction to replace the protection buffer to prevent damage to the display.

Overview of the packaging
6. Repackaging instructions

6.1 Replacing the protection buffer

How to replace the protection buffer

1. Place the display on a stable surface.
2. Put the display in the lowest position and fasten the height mechanism, see "Unlocking the height mechanism", page 9.
3. Very important: Tilt the panel away from the foot before changing the orientation.
4. Turn the panel counterclockwise to put the panel in landscape orientation, see "Adjusting the display position", page 9.
5. Place the connector compartment cover in the protection buffer.
6. Slide the protection buffer over the foot of the display.
7. Tilt the panel back to the foot.

Image 6-2
Placing the protection buffer.
6. Repackaging instructions

6.2 Repacking your display

How to repack your display

1. Place the empty bottom box on a stable surface.
2. Place the bottom buffer in the box.
3. Put the display together with the protection buffer (see "Replacing the protection buffer", page 34) in the dedicated cavity of the bottom buffer.
4. Put the top buffer on top of the display.
5. Slide the top box over the bottom box.
6. Use the three lock bayonets to lock the box.
6. Repackaging instructions
7. CLEANING YOUR DISPLAY

7.1 Cleaning instructions

To clean the display

Clean the display using a sponge, cleaning cloth or soft tissue, lightly moistened with a recognized cleaning product for medical equipment. Read and follow all label instructions on the cleaning product. In case of doubt about a certain cleaning product, use plain water.

Do not use following products:

- Alcohol/solvents at higher concentration > 5%
- Strong alkalis lye, strong solvents
- Acid
- Detergents with fluoride
- Detergents with ammonia
- Detergents with abrasives
- Steel wool
- Sponge with abrasives
- Steel blades
- Cloth with steel thread

**CAUTION:** Take care not to damage or scratch the front glass or LCD. Be careful with rings or other jewelry and do not apply excessive pressure on the front glass or LCD.

**CAUTION:** Do not apply or spray liquid directly to the display as excess liquid may cause damage to internal electronics. Instead, apply the liquid to a cleaning cloth.
7. Cleaning your display
8. IMPORTANT INFORMATION

8.1 Safety information

General recommendations
Read the safety and operating instructions before operating the device.
Retain safety and operating instructions for future reference.
Adhere to all warnings on the device and in the operating instructions manual.
Follow all instructions for operation and use.

Electrical Shock or Fire Hazard
To prevent electric shock or fire hazard, do not remove cover.
No serviceable parts inside. Refer servicing to qualified personnel.
Do not expose this apparatus to rain or moisture.

Modifications to the unit:
Do not modify this equipment without authorization of the manufacturer.

Type of protection (electrical):
Display with external power supply: Class I equipment.

Degree of safety (flammable anesthetic mixture):
Equipment not suitable for use in the presence of a flammable anesthetic mixture with air or with oxygen
or nitrous oxide.

Non-patient care equipment
• Equipment primarily for use in a health care facility that is intended for use where contact with a patient
is unlikely (no applied part).
• The equipment may not be used with life support equipment.
• The user should not touch the equipment, nor its signal input ports (SIP)/signal output ports (SOP)
and the patient at the same time.

Power connection – Equipment with external 24 VDC power supply
• Power requirements: The equipment must be powered using the delivered medical approved 24 VDC
(SELV) power supply.
• The medical approved DC (SELV) power supply must be powered by the AC mains voltage.
• The power supply is specified as a part of the ME equipment or combination is specified as a ME
system.
• To avoid the risk of electric shock, this equipment must only be connected to a supply mains with
protective earth.
• The equipment should be installed near an easily accessible outlet.
• The equipment is intended for continuous operation.

Transient over-voltage
If the device is not used for a long time, disconnect it from the AC inlet to avoid damage by transient
over-voltage.
To fully disengage the power to the device, please disconnect the power cord from the AC inlet.

**Power cords:**
- Utilize a UL-listed detachable power cord, 3-wire, type SJ or equivalent, 18 AWG min., provided with a hospital-grade type plug 5-15P configuration for 120V application, or 6-15P for 240V application.
- Do not overload wall outlets and extension cords as this may result in fire or electric shock.
- Mains lead protection (U.S.: Power cord): Power cords should be routed so that they are not likely to be walked upon or pinched by items placed upon or against them, paying particular attention to cords at plugs and receptacles.
- The power supply cord should be replaced by the designated operator only at all time.
- Use a power cord that matches the voltage of the power outlet, which has been approved and complies with the safety standard of your particular country.

**Water and moisture**

Never expose the display to rain or moisture.

Never use the display near water - e.g. near a bathtub, washbasin, swimming pool, kitchen sink, laundry tub or in a wet basement.

**Ventilation**

Do not cover or block any ventilation openings in the cover of the set. When installing the device in a cupboard or another closed location, heed the necessary space between the set and the sides of the cupboard.

**Installation**

Place the device on a flat, solid and stable surface that can support the weight of at least 3 devices. If you use an unstable cart or stand, the device may fall, causing serious injury to a child or adult, and serious damage to the device.

This apparatus conforms to:

National Scandinavian Deviations for CL. 1.7.2:

Finland: "Laite on liitettävä suojamaadoituskoskettimilla varustettuun pistorasiaan"

Norway: "Apparatet må tilkoples jordet stikkontakt"

Sweden: "Apparaten skall anslutas till jordat uttag"

**8.2 Environmental information**

**Disposal Information**

Waste Electrical and Electronic Equipment

This symbol on the product indicates that, under the European Directive 2012/19/EU governing waste from electrical and electronic equipment, this product must not be disposed of with other municipal waste. Please dispose of your waste equipment by handing it over to a designated collection point for the...
recycling of waste electrical and electronic equipment. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate these items from other types of waste and recycle them responsibly to promote the sustainable reuse of material resources.

For more information about recycling of this product, please contact your local city office or your municipal waste disposal service.

For details, please visit the Barco website at: http://www.barco.com/en/AboutBarco/weee

**Turkey RoHS compliance**

[Republic of Turkey: In conformity with the WEEE Regulation]

**中国大陆 RoHS**

Chinese Mainland RoHS

根据中国大陆《电子信息产品污染控制管理办法》（也称为中国大陆RoHS），以下部分列出了Barco产品中可能包含的有毒和/或有害物质的名称和含量。中国大陆RoHS指令包含在中国信息产业部MCV标准："电子信息产品中有毒物质的限量要求"中。

According to the “China Administration on Control of Pollution Caused by Electronic Information Products” (Also called RoHS of Chinese Mainland), the table below lists the names and contents of toxic and/or hazardous substances that Barco’s product may contain. The RoHS of Chinese Mainland is included in the MCV standard of the Ministry of Information Industry of China, in the section “Limit Requirements of toxic substances in Electronic Information Products”.

<table>

本显示器符合以下要求

This monitor is compliant with the following requirements

GB 21520-2008
8.3 Regulatory compliance information

Indications for use
The Nio 3MP LED Display is intended to be used as a tool in displaying and viewing digital images (excluding digital mammography) for review and analysis by trained medical practitioners. Caution (USA): Federal law restricts this device to sale by or on the order of a physician. (Details & exemptions are in the Code of Federal Regulations Title 21, 801 Part D).

FCC class B
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This device has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This device generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this device does cause harmful interference to radio or television reception, which can be determined by turning the device off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the device and receiver.
- Connect the device into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

Canadian notice
This ISM device complies with Canadian ICES-001.
Cet appareil ISM est conforme à la norme NMB-001 du Canada.

8.4 EMC notice

General information
No specific requirement on the use of external cables or other accessories except power supply.

With the installation of the device, use only the delivered power supply or a spare part provided by the legal manufacturer. Using another can result in a decrease of the immunity level of the device.

Electromagnetic emissions
The Nio 3MP LED Display is intended for use in the electromagnetic environment specified below. The customer or the user of the Nio 3MP LED Display should assure that it is used in such an environment.

<table>
<thead>
<tr>

This Nio 3MP LED Display complies with appropriate medical EMC standards on emissions to, and interference from surrounding equipment. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Interference can be determined by turning the equipment off and on.

If this equipment does cause harmful interference to, or suffer from harmful interference of, surrounding equipment, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna or equipment.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced technician for help.

### Electromagnetic immunity

| Power frequency (50/60 Hz) magnetic field                                     | 3 A/m                                                                                 | Not applicable ²                                                                    | Power frequency magnetic fields should be at levels characteristic of a typical location in a typical commercial or hospital environment. |
| Conducted RF                                                                 | 3 Vrms  
150 kHz to 80 MHz                                                                 | 3 V                                                                               | Portable and mobile RF communications equipment should be used no closer to any part of the Nio 3MP LED Display, including cables, than the recommended separation distance calculated from the equation applicable to the frequency of the transmitter. Recommended separation distance  
\( d = 1.2\sqrt{P} \)  
\( d = 1.2\sqrt{P} \) 80 MHz to 800 MHz  
\( d = 2.3\sqrt{P} \) 800 MHz to 2.5 GHz  
Where \( P \) is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer and \( d \) is the recommended separation distance in meters (m).  
Field strengths from fixed RF transmitters, as determined by an electromagnetic site |
| Radiated RF                                                                  | 3 V/m  
80 MHz to 2.5 GHz                                                                   | 3 V/m                                                                             | Power frequency magnetic fields should be at levels characteristic of a typical location in a typical commercial or hospital environment. |

1. \( U_T \) is the a.c. mains voltage prior to application of the test level.
2. Nio 3MP LED Display doesn’t contain susceptible components to magnetic fields.
### 8. Important information

<table>
<thead>
<tr>
<th>Immunity test</th>
<th>IEC 60601 Test levels</th>
<th>Compliance level</th>
<th>Electromagnetic environment – guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td>survey, should be less than the compliance level in each frequency range. Interference may occur in the vicinity of equipment marked with symbol:</td>
</tr>
</tbody>
</table>

At 80 MHz and 800 MHz, the higher frequency range applies.

These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.

**Recommended separation distance**

The Nio 3MP LED Display is intended for use in an electromagnetic environment in which radiated RF disturbances are controlled. The customer of the user of the Nio 3MP LED Display can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the Nio 3MP LED Display as recommended below, according to the maximum output power of the communications equipment.

<table>
<thead>
<tr>
<th>Rated maximum output power of transmitter</th>
<th>Separation distance according to frequency of transmitter</th>
</tr>
</thead>
<tbody>
<tr>
<td>W</td>
<td>150kHz to 80MHz</td>
</tr>
<tr>
<td>0.01</td>
<td>d=1.2√P</td>
</tr>
<tr>
<td>0.1</td>
<td>0.12</td>
</tr>
<tr>
<td>1</td>
<td>0.38</td>
</tr>
<tr>
<td>10</td>
<td>1.2</td>
</tr>
<tr>
<td>100</td>
<td>3.8</td>
</tr>
<tr>
<td>1000</td>
<td>12</td>
</tr>
</tbody>
</table>

At 80 MHz and 800 MHz, the separation distance for the higher frequency range applies.

---

3. Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) telephones and land mobile radios, amateur radio, AM and FM radio broadcast and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the Nio 3MP LED Display is used exceeds the applicable RF compliance level above, the Nio 3MP LED Display should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as re-orienting or relocating the Nio 3MP LED Display.

4. Over the frequency range 150 kHz to 80 MHz, field strengths should be less than 3 V/m.

5. For transmitters rated at a maximum output power not listed above, the recommended separation distance d in meters (m) can be estimated using the equation applicable to the frequency of the transmitter. Where P is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.
8. Important information

These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection form structures, object and people.

8.5 Explanation of symbols

Symbols on the device

On the device or power supply, you may find the following symbols (nonrestrictive list):

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CE</td>
<td>Indicates compliance with the Directive 93/42/EEC as Class I device</td>
</tr>
<tr>
<td>CE 0120</td>
<td>Indicates compliance with the Directive 93/42/EEC as Class II device</td>
</tr>
<tr>
<td>FCC</td>
<td>Indicates compliance with Part 15 of the FCC rules (Class A or Class B)</td>
</tr>
<tr>
<td>UL</td>
<td>Indicates the device is approved according to the UL regulations</td>
</tr>
<tr>
<td>UL US</td>
<td>Indicates the device is approved according to the UL regulations for Canada and US</td>
</tr>
<tr>
<td>D</td>
<td>Indicates the device is approved according to the UL Demko regulations</td>
</tr>
<tr>
<td>CCC</td>
<td>Indicates the device is approved according to the CCC regulations</td>
</tr>
<tr>
<td>VCCI</td>
<td>Indicates the device is approved according to the VCCI regulations</td>
</tr>
<tr>
<td>KC</td>
<td>Indicates the device is approved according to the KC regulations</td>
</tr>
<tr>
<td>BSMI</td>
<td>Indicates the device is approved according to the BSMI regulations</td>
</tr>
<tr>
<td>PSE</td>
<td>Indicates the device is approved according to the PSE regulations</td>
</tr>
<tr>
<td>USB</td>
<td>Indicates the USB connectors on the device</td>
</tr>
</tbody>
</table>
### 8. Important information

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![DisplayPort]</td>
<td>Indicates the DisplayPort connectors on the device</td>
</tr>
<tr>
<td>![Manufacturing Date]</td>
<td>Indicates the manufacturing date</td>
</tr>
<tr>
<td>![Temperature Limitations]</td>
<td>Indicates the temperature limitations(^6) for the device to safely operate within specs</td>
</tr>
<tr>
<td>![Device Serial No.]</td>
<td>Indicates the device serial no.</td>
</tr>
<tr>
<td>![Warning]</td>
<td><strong>Warning:</strong> dangerous voltage</td>
</tr>
<tr>
<td>![Caution]</td>
<td><strong>Caution</strong></td>
</tr>
<tr>
<td>![Operating Instructions]</td>
<td>Consult the operating instructions</td>
</tr>
<tr>
<td>![Recycling]</td>
<td>Indicates this device must not be thrown in the trash but must be recycled, according to the European WEEE (Waste Electrical and Electronic Equipment) directive</td>
</tr>
<tr>
<td>![Direct Current]</td>
<td>Indicates Direct Current (DC)</td>
</tr>
<tr>
<td>![Alternating Current]</td>
<td>Indicates Alternating Current (AC)</td>
</tr>
<tr>
<td>![Stand-by]</td>
<td>Stand-by</td>
</tr>
<tr>
<td>![Equipotentiality]</td>
<td>Equipotentiality</td>
</tr>
</tbody>
</table>

#### Symbols on the box

On the box of the device, you may find the following symbols (nonrestrictive list):

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Breakable]</td>
<td>Indicates a medical device that can be broken or damaged if not handled carefully when being stored.</td>
</tr>
<tr>
<td>![Moisture]</td>
<td>Indicates a medical device that needs to be protected from moisture when being stored.</td>
</tr>
<tr>
<td>![Storage Direction]</td>
<td>Indicates the storage direction of the box. The box must be transported, handled and stored in such a way that the arrows always point upwards.</td>
</tr>
</tbody>
</table>

---

\(^6\) Values for xx and yy can be found in the technical specifications paragraph.
### 8. Important information

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.png" alt="icon" /></td>
<td>Indicates the maximum number of boxes to be stacked on each other.</td>
</tr>
<tr>
<td><img src="image2.png" alt="icon" /></td>
<td>Indicates that the box should be carried with two persons.</td>
</tr>
<tr>
<td><img src="image3.png" alt="icon" /></td>
<td>Indicates that the box should not be cut with a knife, a cutter or any other sharp object.</td>
</tr>
<tr>
<td><img src="image4.png" alt="icon" /></td>
<td>Indicates the temperature limits to which the medical device can be safely exposed when being stored.</td>
</tr>
<tr>
<td><img src="image5.png" alt="icon" /></td>
<td>Indicates the range of humidity to which the medical device can be safely exposed when being stored.</td>
</tr>
<tr>
<td><img src="image6.png" alt="icon" /></td>
<td>Indicates the range of atmospheric pressure to which the medical device can be safely exposed when being stored.</td>
</tr>
</tbody>
</table>
